DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-22 ^{are} rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The parameter MFR, as required in all of the claims, cannot be understood because applicant's description thereof is internally inconsistent. Specifically, the claims have written MFR as a rate, requiring "MFR<20 dg/min". In contrast, the specification at paragraph [0036] states that the MFR refers to a melt flow ratio, also stating that it is measured according to ASTM D-1238, Condition L. Applicant's description of MFR being both a ratio and a rate having units of dg/min is mutually exclusive; i.e., a ratio of melt flow rates is dimensionless, whereas ASTM D-1238, Condition L is a method for measuring melt flow rate at 230°C and 2.16kg, measured in dg/min. Therefore, it cannot be determined whether applicant is intending to specify MFR as a rate (with units of dg/min, as measured by ASTM 1238-D Condition L) or as a ratio (dimensionless). If MFR is intended as a rate, then the claims are furthermore indefinite in that it is not understood how the melt flow rate at 230°C/2.1kg could be less than the claimed MI value (stated in the specification at paragraph [0034] to be taken at 190°C/2.1kg). If MFR is intended as a ratio, then the claims are

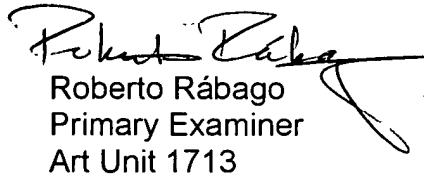

furthermore indefinite in that it cannot be determined which melt flow rate values have been used to determine the ratio.

The fundamental ambiguity resulting from this issue precludes search or consideration of the prior art at this time, including the documents cited on the IDS filed 11/17/2003.
